Udyam Saathi

A simpler digital start for small businesses

Discover a useful bundle, verify documents and follow activation in one workspace.

7.36%

baseline lead-to-activation
368 activations from 5,000 synthetic leads

Platform Partner unstop

Professional offices are the first pilot segment

11.07% observed conversion

vs 4.06% for micro retail. Clinics, CA firms and coaching centres need reliable internet and secure tools.

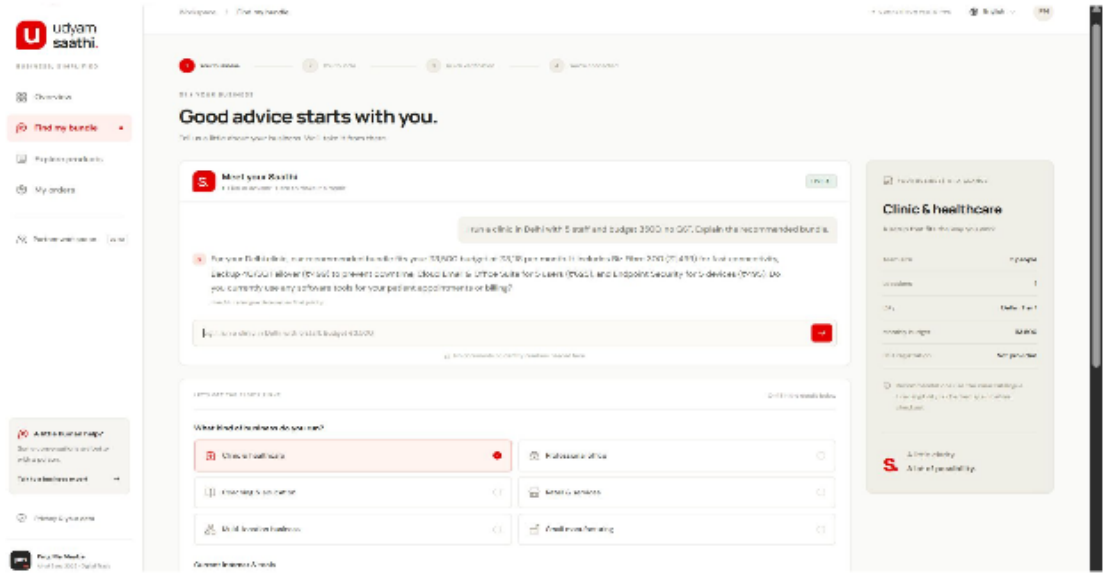

Five-person clinic, one site	Quantity	Monthly INR
Biz Fibre 300	1 site	1,499
Backup 4G/5G Failover	1 site	499
Cloud Email & Office Suite	5 users	625
Endpoint Security	5 devices	495
Total		3,118

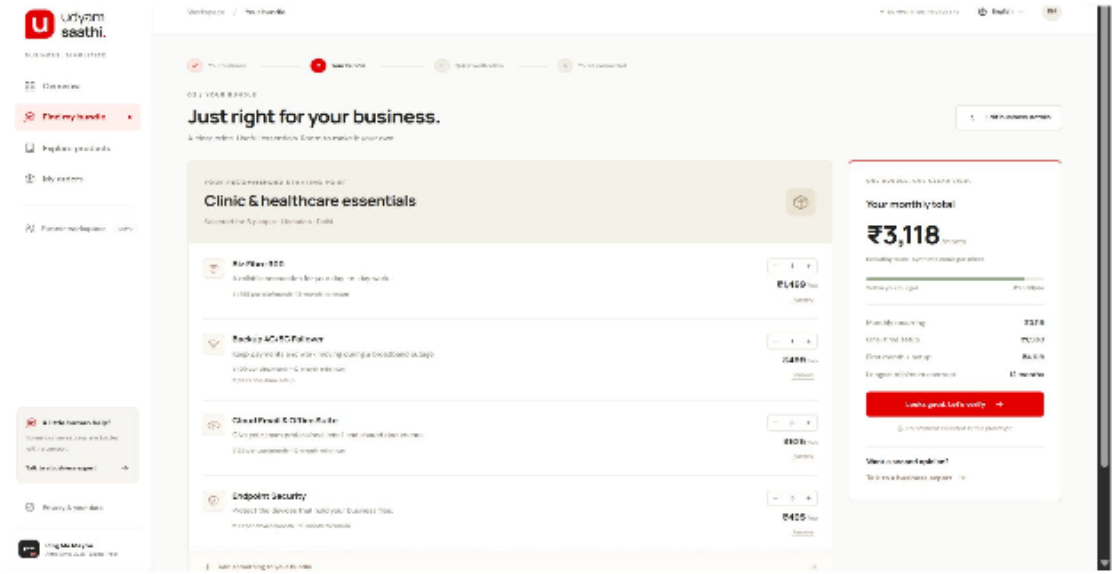

INR 1,500 setup
INR 4,618 first month
12-month minimum

Starting case prices, excluding taxes. Existing tools are retained where possible.
Multi-site and manufacturing follow later.

One journey, with human help for exceptions

01 Discover and explain

English, Hindi or Tamil advice. Catalogue rules control prices, quantities and dependencies.

02 Review the bundle

Itemised charges and clear terms. Consent, local OCR and order tracking follow in the same workspace.

Platform Partner unstop

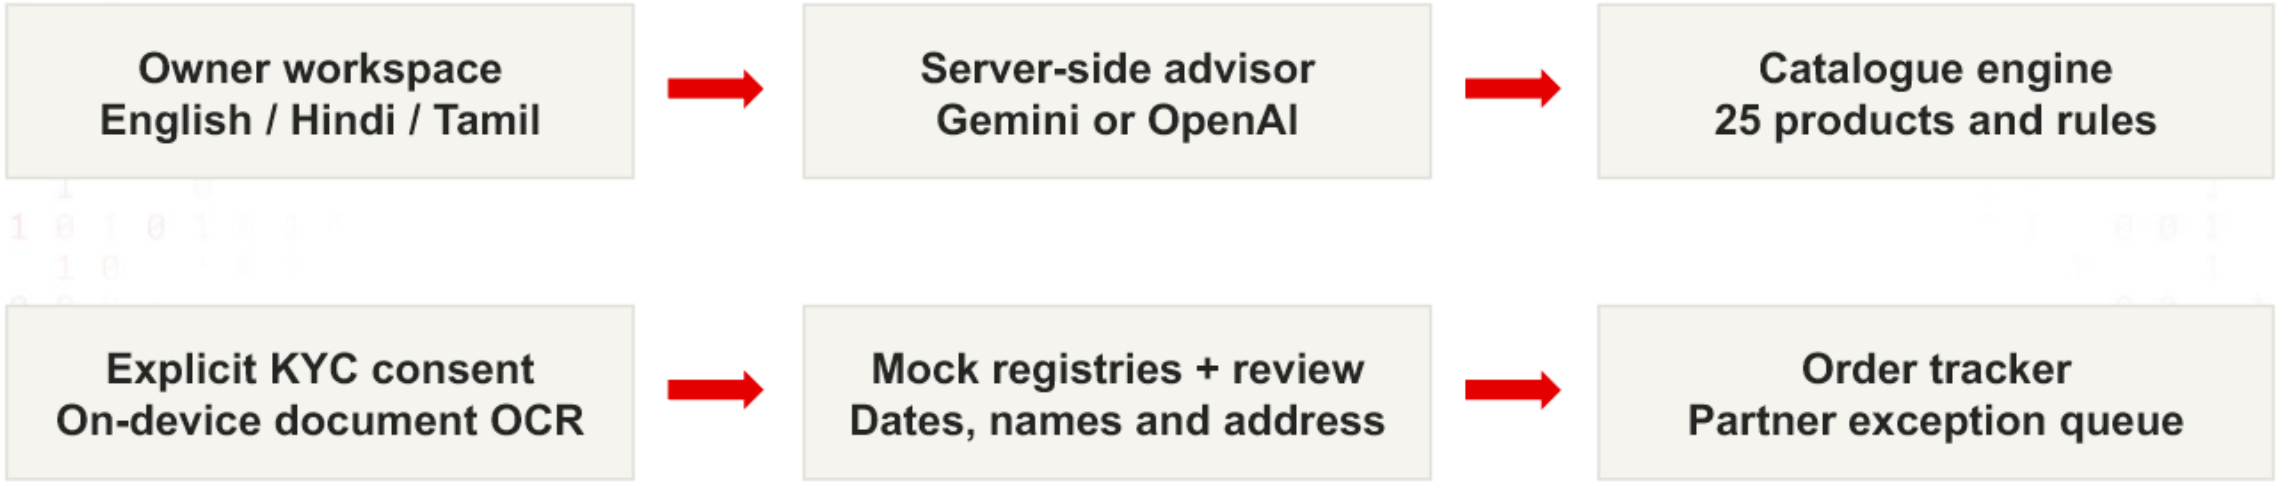

Integrated bundles already exist; the journey must improve

Offer	Established strength	Observed public entry	Implication for us
Airtel Business [1]	Broad connectivity, cloud and security portfolio	Request a callback for tailored solutions	Reuse product depth; reduce discovery effort
JioBusiness [2]	Integrated connectivity and digital services	Product plans and digital self-care	A bundle alone is not differentiation
Vi ReadyForNext [3]	MSME digital-readiness assessment and advisory	Assessment-led discovery	Connect discovery to a transparent next step
Udyam Saathi	Catalogue rules + local OCR + partner handoff	One demonstrable onboarding prototype	Test completion and clarity in the pilot

Differentiation hypothesis: multilingual guidance, explainable bundles and visible exceptions in one flow. Competitor KYC speed and end-to-end conversion remain unverified.

Platform Partner unstop

The model advises; the catalogue and checks decide

Data flow: preferences and chat reach the advisor; document images stay in the browser.

Controls: consent withdrawal clears KYC, identifiers are masked in results, credentials stay on the server, and owners can reset session data. Legal and operator approval remain rollout gates.

Platform Partner unstop

A 90-day pilot tests conversion before expansion

1,000 leads, two cities, professional offices first

Days 1–30
Operator and privacy review
Serviceability integration
Partner training

Days 31–60
Assisted launch
Instrument the funnel
Fix document exceptions

Days 61–90
Compare with a control
Audit support and retention
Expand only after review

Illustrative pilot economics

15% conversion = 150 activations
Same lead spend + INR 20 digital cost per lead
Modelled CAC: INR 8,024 vs INR 10,695 segment baseline

25% lower CAC

Planning scenario only

Platform Partner unstop

Five measures determine whether the pilot expands

Metric	Office baseline	Proposed target	Measurement
Lead-to-activation	11.07%	15%	Activated / all pilot leads
Mean lead-to-activation	16.9 days	10 days	Same eligible cohorts
Acquisition cost	INR 10,695	≤ INR 9,000	All acquisition cost / activated
Customer follow-up calls	3.07	≤ 1.5	Mean per activated customer
Six-month churn	13.8%	≤ 12%	Review at month six

Rollout gates

Hallucinations: catalogue-controlled quotes. Document fraud: authorised verification + human review. Installation delays: serviceability checks. Partner adoption: shared leads and explicit ownership.
